The president of Finnish heavy metal and I33t speaking appreciation society forgot his password. Here is the unshadowed information

'cybersecbase:\$6\$LwmDTb98\$SVvTAKhUbJbDcDJqoDFVnIU3DkMlstkT7GawLcEXoCYwUfCjVe.5My6BQzWbCKgF6TIUM/kQ2Jrl2yb4ykJ.:1000:1000:csb,,,/home/cybersecbase:/bin/bash'

Hide description ^

Goal was to crack the password of the president of Finnish heavy metal and I33t speaking appreciation society. We get the unshadowed format of the /etc/shadow which allows us to use tool like John the Ripper and HashCat to crack it. So, I just loaded rockyou.txt and John the Ripper and saw what happened. After a while I realized my brainfart and read the exercise more carefully. We have 2 hints, Finnish heavy metal and I33t speak with these I opened Wikipedia page on Finnish heavy metal bands and copied all to a txt file.

Thankfully HashCat comes loaded with ready to go set of rules to match our "I33t speak". I ran hashcat with our file full of metal bands and "dive.rule" rule set. It took about 12 second to find the right password which was "F1nntroll".
